3. The following is an examiner's statement of reasons for allowance: Examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of said prior art which teaches a light-scanning optical apparatus comprising: an optical deflector; an incidence optical system adapted to cause a light beam emitted from a light source to strike a deflection plane of said optical deflector with a predetermined angle in a sub-scanning section; and a focusing optical system for focusing the light beam reflected by the deflection plane of the optical deflector on a surface to be scanned, wherein said focusing optical system includes an $f\theta$ lens system having a spherical lens and a first cylindrical lens showing power in the main-scanning direction and an optical system showing power in the sub-scanning direction, wherein said focusing optical system satisfies the requirements of conditional formulas (1) and (2) (as noted in specification) wherein F is the focal length of the $f\theta$ lens system in the main-scanning direction, R_2 is the radius of curvature of the surface of the spherical lens facing the surface to be scanned, R_3 is the radius of curvature of the surface of the first cylindrical lens facing the optical deflector as

viewed in the main-scanning direction, N1 is the refractive index of the material of the spherical lens at the operating wavelength, and N2 is the refractive index of the material of the first cylindrical lens at the operating wavelength, as set forth in claims 1 and 19 including all of the features recited therein.
